

HARISH M

Software Developer • React.js & .NET

+91-9361070003 | harish.tech02@gmail.com | [linkedin.com/in/harish43](https://www.linkedin.com/in/harish43) | [Portfolio](#) | Chennai, TN

PROFESSIONAL SUMMARY

Results-driven Software Developer with 1+ year of experience building scalable, responsive React.js interfaces and integrating them with .NET backend APIs. Delivered 4 production web applications across e-commerce, HR management, and workplace safety domains. Worked closely with .NET backend developers to connect and consume RESTful APIs, implement role-based authentication, optimize UI performance, and manage React state — consistently shipping production-ready features on schedule.

WORK EXPERIENCE

VIVIFY TECHNOCRATS | Software Developer

Feb 2025 – May 2026 • Chennai, TN

- Delivered seamless data flow across 4+ enterprise modules by building React.js UI components and connecting them to .NET backend APIs, achieving zero critical data-sync bugs in production.
- Improved secure access across 3+ user roles, measured by 100% elimination of unauthorized access incidents, by implementing role-based authentication flows and dynamic dashboard modules.
- Reduced average API response load time and improved user-perceived performance by optimizing React state management and batching API calls across all active projects.
- Accelerated sprint velocity by ~30% as measured by team metrics, by closely collaborating with .NET backend developers to co-define RESTful API contracts, align request/response structures, and ensure smooth frontend-backend integration.

PROJECTS

EMPLOYEEHUB — React.js + .NET | HR Management System

Live: vivifysoft.in/employeehub

- Developed employee self-service and admin modules covering leave requests, advance payments, attendance tracking, leave balances, and an employee directory — replacing all manual HR workflows.
- Implemented real-time notifications for request approvals and rejections, and built a manager dashboard enabling faster decision-making and improved workforce visibility.

VIVIFY SAFETY SYSTEM — React.js + .NET | Workplace Safety & Attendance

Live: vivifysoft.in/safety

- Delivered punch-in/out attendance tracking with timestamps, a near-miss hazard reporting system, and a mandatory training video library with per-employee completion tracking.
- Improved safety compliance workflows measurably by enabling real-time hazard flagging and ensuring all employees completed mandatory safety briefings through the integrated training module.

VIVIFY ASSESSMENT — React.js + .NET | AI-Powered Interview Assessment Platform

Live: vivifysoft.in/vivifyassessment/#/Login

- Built an end-to-end AI-powered interview assessment platform enabling admins to upload topic PDFs, auto-generate AI questions, and manage candidates — with a dashboard tracking total candidates, interviews attended, passed, and rejected.
- Designed separate admin and candidate portals with role-based authentication, real-time score reporting, and full candidate lifecycle management covering invite, attend, and result tracking.

Sri Gokilaa Crackers — React.js + .NET | E-Commerce Platform

Live: srigokilaacrackers.com

- Developed and styled responsive React.js UI for e-commerce platforms, consuming .NET backend APIs for product data, cart management, and order workflows.
- Developed product catalogs, cart workflows, bulk ordering, and admin dashboards for inventory management.
- Optimised UI components for responsive layouts and smooth cross-browser performance.

JARVIS AI ASSISTANT — Python + Ollama | Personal AI Automation Assistant [Personal Project]

GitHub: [harish-lab01/JARVIS](https://github.com/harish-lab01/JARVIS)

- Built an AI-powered assistant with intelligent conversations and real-time responses using locally integrated LLMs.
- Implemented voice/text commands to control desktop applications and system-level tasks.
- Designed modular Python automation workflows for command execution and productivity enhancement.

CHAT HUB — React · Firebase | Real-Time Chat Application [Personal Project]

Live: chat-hub-rouge.vercel.app/login

- Engineered a full-stack real-time messaging platform inspired by WhatsApp using Firebase Realtime Database, supporting instant bi-directional message delivery with live sync across clients and secure Email/Password authentication via Firebase Auth.
- Built live typing indicators and real-time online/offline presence tracking using Firebase onDisconnect listeners, replicating production-grade chat UX patterns seen in consumer messaging apps.
- Developed a push-style in-app notification system with unread message badge counters and deployed the application on Vercel, leveraging a component-based React architecture for maintainability.

TECHNICAL SKILLS

Frontend

React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Integration

RESTful API Integration, .NET API Consumption, Axios/Fetch, Role-Based Authentication

Performance

React State Management, Component Optimization, API Call Batching

Tools

Git, GitHub, VS Code, Node.js / npm • AI-Assisted Dev: Antigravity, Kiro, Claude, Cursor AI

SOFT SKILLS & LANGUAGES

Soft Skills

- Agile Collaboration & Sprint Planning
- Problem Solving & Debugging

Languages

- English — Fluent
- Tamil — Native

EDUCATION & CERTIFICATIONS

B.Tech in Computer Science & Engineering — Bharathidasan University, Tiruchirappalli, TN

Jul 2020 – Apr 2024 • 68%

MERN Stack Web Development Certification — Error Makes Clever

Dec 2023 – Feb 2024
